

## JUG KNOT:

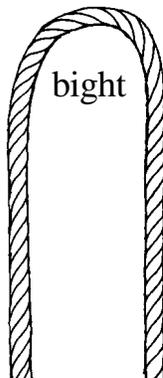

Use ---- to provide a convenient carrying handle for jug or bottle ---- to attach a tool, such as a hammer to a security line to prevent accidental dropping --- to add a wrist loop to a walking staff --- to attach a safety line to a canoe paddle ..... use your imagination, but be sure that you keep safety in mind.

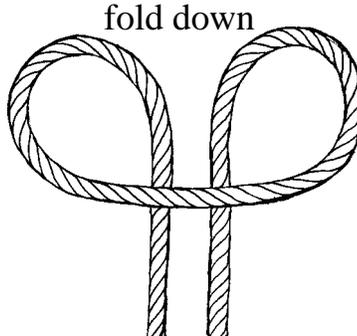

**Other names** ---- Jar knot, moonshiner's knot, hackamore, bridle knot.

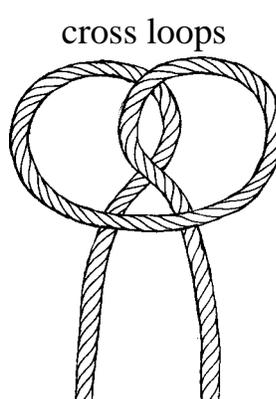

**Comments** ---- The most common use is to provide a loop handle attached to the neck of a bottle. The loop handle makes it easy to carry several bottles with one hand. If a toggle or a two strand button knot such as boatswain whistle knot is added to the free end of the rope,

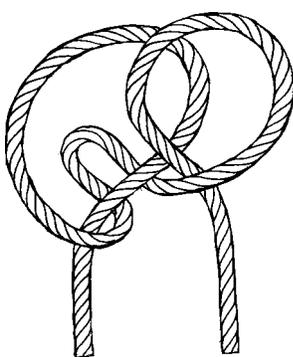

**JUG KNOT**

**1.**  bight

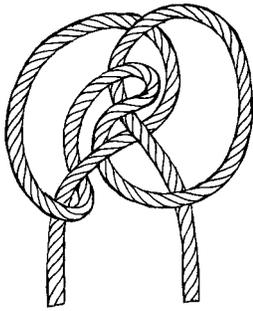

**2.**  fold down

**3.**  cross loops

The loop of the jug knot can be used to toggle the bottle to a belt so that the bottle can be used as a canteen.

Plastic bottles with screw-on lids such as soda, sport drink, and mineral water bottles make strong, lightweight containers for carrying water on hikes and camp outs. 2 and 3 liter soda bottles are large enough to use as water containers around the camp kitchen. Smaller bottles (8 to 16 oz.) can be used as personal water bottles or canteens. These bottles can be made even more convenient by using a jug knot to attach a loop handle.

To help keep your water cool and refreshing in hot weather, place a sock over the bottle, wet the sock when you fill the bottle, evaporation will do the rest.

In cold weather, carry your water bottle under your coat. A dry sock placed over the bottle will help keep the water from freezing.

To protect your health, wash and disinfect your water bottle with a chlorine bleach solution and don't share your water bottle with others; show them how to make a water bottle of their own.

**Narrative** ---- (For **jug knot** knotboard) (1) Form a bight in the middle of a 24 to 30 inch long by 3/16 inch diameter rope. (2) Fold the bight down over the standing ends to form two loops. (3) Place the right loop over the side of the left loop. (4) Weave the middle of the bight under the standing end; then over the left edge of the right loop; (5) next go under the right edge of the left loop; (6) finally pass the bight over the right side of the left loop. (7) Turn the tops of the original loops down over the knot. (8) Place the knot over the neck of a bottle and work the knot tight so that the bight forms a 4 to 5 inch loop handle and the loose ends are even.
